In the Claims:

Claims 1-20 (canceled)

Claim 21 (new): A method for a requestor requesting a request comprising:

generating one or more identifiers having a capability of being registered in a plurality of registerable naming systems, said plurality of said registerable naming systems are naming systems separate from one another and are not part of a larger single naming system, wherein at most one registerable naming system of said plurality of said registerable naming systems is a global public internet domain name system (DNS); and,

providing the requestor with an ability to determine whether each said generated identifier is available for registration in each said registerable naming system of said plurality of said registerable naming systems.

Claim 22 (new): The method, as set forth in claim 21, wherein said generating said one or more identifiers includes generating a plurality of identifiers including at least a first identifier corresponding to a first naming system and a second identifier corresponding to a second naming system.

Claim 23 (new): The method, as set forth in claim 22, wherein said first identifier and said second identifier are the same identifier or said first identifier and said second identifier are similar identifiers.

Claim 24 (new): The method, as set forth in claim 22, wherein said first identifier includes a portion of said second identifier or said second identifier includes a portion of said first identifier.

Claim 25 (new): The method, as set forth in claim 22, wherein said generating said plurality of identifiers includes generating said plurality of identifiers from said first identifier.

Claim 26 (new): The method, as set forth in claim 21, wherein said generating said one or more identifiers includes generating at least one identifier by consulting from at least one of a word generation method, dictionary, thesaurus, prefix, suffix, word root, word stem, set of heuristic naming rules, namespace syntax, identifier equivalent, language translation, phonetic spelling, phonemes, identifier watch list, list of desirable descriptors, personal identifier portfolio, competitor identifier portfolio, mnemonic method, abbreviation, namespace mapping, identifier mapping, delimiter

mapping, rhyming method, name-to-number conversion, number-to-name conversion, and identifier history.

Claim 27 (new): The method, as set forth in claim 21, further including determining whether said one or more identifiers is available for registration in said plurality of registerable naming systems.

Claim 28 (new): The method, as set forth in claim 27, further including registering at least one identifier that is determined available for registration in at least one registerable naming system of said plurality of registerable naming systems.

Claim 29 (new): The method, as set forth in claim 28, wherein said registering said at least one identifier that is determined available for registration includes registering said at least one identifier from a unified registration form interface.

Claim 30 (new): The method, as set forth in claim 22, further including at least one of a selecting at least one of a first identifier and second identifier from said one or more identifiers and selecting at least one of a first registerable naming system and second registerable naming system from said plurality of registerable naming systems.

Claim 31 (new): The method, as set forth in claim 30, further including generating a second identifier in response to selecting said first identifier.

Claim 32 (new): The method, as set forth in claim 30, further including at least one of a concurrently selecting from said first naming system and said second naming system, concurrently selecting from said first identifier and said second identifier, concurrently determining whether said first identifier and said second identifier is available for registration, and concurrently registering said first identifier and said second identifier.

Claim 33 (new): The method, as set forth in claim 32, further including allocating said first identifier when it is determined that said first identifier is available for registration and determining whether said second identifier is available for registration further includes determining whether said second identifier is available for registration while said first identifier is allocated.

Claim 34 (new): The method, as set forth in claim 21, wherein each identifier of said one or more identifiers is one of a valid domain name, fictitious domain name, TLDA name, multilingual domain name, phone number, keyword, search term, RealName, Network, Internet keyword, AOL keyword, Publisher Item Identifier (PII), Digital Object Identifier (DOI), Inter Deposit Digital Number (IDDN), International Standard Book Number (ISBN), International Standard Technical Report Number (ISRN), International Standard Serial Number (ISSN), Serial Item and Contribution Identifier (SICI), Book Item and Component Identifier (BICI), European Article Number (EAN), Universal Product Code (UPC), Standard Address Number (SAN), International Standard Audiovisual Number (ISAN), International Standard Work Code (ISWC), International Standard Music Number (ISMN), International Standard Recording Code (ISRC), Intellectual Property Identification (IPI), Uniform File Identifier (UFI), Uniform Resource Identifier (URI), Persistent Uniform Resource Locator (PURL), Universally Unique Identifier (UUID), Globally Unique Identifier (GUID), Namespace Identifier (NID), Bank Identification Number (BIN), Personal Identification Number (PIN), Mod 10 Number, credit card number, Electronic Serial Number (ESN), Mobile Identification Number (MIN), Automatic Number Identification (ANI), Social Security Number (SSN), Employer Identification Number (EIN), Taxpayer Identification Number (TIN), Vehicle Identification Number (VIN), World manufacturer identifier (WMI), Manufacturer Identification Number (MIN), Market Identifier Code (MIC), Standard Industrial Classification (SIC), Standard Occupational Classification (SOC), Stock Keeping Unit number (SKU), International Business Entity Identifier (IBEI), Institution Identification Code (IIC), National Provider Identifier (NPI), Dunn and Bradstreet Number (DUNS), SEC file number, patent number, trademark number, serial number, charter number, policy number, certification number, document identifier, reference number, invoice number, transaction identifier, validation code, account number, merchant code, reseller code, affiliate code, authorization code, network identifier, user identifier, PGP key, digital certificate, driver license number, license plate number, trademark, servicemark, tradename, fictitious name, company name, DBA, AKA, stock symbol, station identifier, broadcast station call letters, ham radio call letters, broadcast frequency number, street name, street address, ZIP code, IP address, host, e-mail address, ICQ number, nickname, screen name, username, alias, handle, document title, book title, song title, movie title, phrase, slogan, machine readable code, glyph, image, icon, animation, sequence of musical notes, date, time, name, abbreviation, mnemonic, moniker, label, alphanumeric, string, character, symbol, token, integer, and number.

Claim 35 (new): The method, as set forth in claim 21, wherein each said registerable naming system of said plurality of said registerable naming systems is one of a domain name system, fictitious domain name system, multilingual naming system, keyword system, telephone naming and numbering system, username naming system, address system, time system, language system, dewey decimal system, catalog naming system, document system, resource naming system, image naming system, geographic naming system, government naming system, and identification naming system.

Claim 36 (new): The method, as set forth in claim 21, wherein said providing the requestor with the ability to determine whether each said generated identifier is available for registration includes one of a providing at least one hyperlink adapted to access an identifier registration service and automatically determining whether each said generated identifier is available for registration.

Claim 37 (new): A method for a requestor requesting a request comprising:

- logging in to an account with a first identifier, said first identifier corresponding to account information;

- generating one or more identifiers corresponding to at least a portion of at least one of a first identifier and account information, said one or more identifiers having a capability of being registered in one or more registerable naming systems; and,

- providing the requestor with an ability to determine whether at least one said generated identifier is available for registration in at least one said one or more registerable naming systems.

Claim 38 (new): The method, as set forth in claim 37, wherein said at least one of a first identifier and account information includes at least one of a username, screen name, handle, login ID, uniform resource identifier, first name, last name, street address, domain name, e-mail address, and telephone number.

Claim 39 (new): The method, as set forth in claim 37, wherein said providing the requestor with the ability to determine whether said at least one said generated identifier is available for registration includes one of a providing at least one hyperlink adapted to access an identifier registration service and automatically determining whether said at least one said generated identifier is available for registration.

Claim 40 (new): A device comprising:

a processor;

a memory in operative association with said processor; and,

a computer readable program code stored in said memory, said program code adapted to execute a method for a requestor requesting a request including logging in to an account with a first identifier, said first identifier corresponding to account information, generating one or more identifiers corresponding to at least a portion of at least one of a first identifier and account information, said one or more identifiers having a capability of being registered in one or more registerable naming systems, and providing the requestor with an ability to determine whether at least one said generated identifier is available for registration in at least one said one or more registerable naming systems.
